

# Korean Gold Plum Yew

Whether showcased as a container specimen or integrated into your garden and landscape, its brilliant foliage will undoubtedly create stunning contrasts with its surroundings.

## *Cephalotaxus harringtonia* 'Korean Gold'

- **Use:** An upright, vase-shaped conifer with very long yellow-green foliage arranged radially around ascending branches. A very unique and beautiful conifer that has a subtropical appearance. A hard to find collector item that would be useful in a shady container.
- **Exposure/Soil:** Morning sun and afternoon shade recommended in the South; moist, well drained soil; dislikes wet sites. Water regularly, when top 3 in. of soil is dry.
- **Growth:** May in time reach 6-10 ft tall and 3-6 ft wide (1.8-3.0 × 0.9 -1.8 m), but it is slow growing, possibly only 3 ft tall after 10 years
- **Hardiness:** Zone 6 -9 Shrub
- **Foliage:** Evergreen. The needles are dark green at the bottom and much lighter at the top, they emerge vivid golden yellow and mature almost lime green.
- **Flower:** Insignificant flowers. Female plants produce red, yew-like fruit with edible flesh and inedible seeds. The fruit is not as attractive or tasty as on common yews.
