

Pop Star Endless Summer Hydrangea

**A must have
for every
garden!**

Hydrangea macrophylla 'Endless Summer Pop Star'

- **Use:** Thanks to its compact size, flower power, and ease of use, Pop Star™ can be planted and make a big, colorful impact in any outdoor space. Whether it's in the garden or a decorative container, Pop Star™ will be a superstar in the landscape.
- **Exposure/Soil:** Partial sun (afternoon shade) is best. Water regularly, when top 3 in. of soil is dry. Keep water off leaves. **DO NOT PLANT IN FULL SUN!** The acidity of the soil will change the color of your blooms. For deep blue flowers, the pH must stay below 5.5. For pink or red flowers you must neutralize the soil to pH 7.0 or higher. Use sulfur to turn your Hydrangea blue and lime to turn them pink.
- **Growth:** Fast-growing to 3 feet high; equal width in only 3 years. After years of trials across North America, Pop Star™ has maintained its small stature with short internodes that creates a tight, strong habit.
- **Hardiness:** Zone 5-9 Shrub
- **Foliage:** Deciduous. Thick, dark green leaves that can stand up to the heat of warm climates.
- **Flower:** Starry blue or pink flowers depending on your soil pH (typically blue in our acidic soils) In addition to the full coverage of early blooms, Pop Star™ is the quickest *Hydrangea macrophylla* in trial to rebloom, with new buds appearing just four weeks after a hard cutback to remove terminal buds.
