

# Green Mound Juniper

**Useful for erosion control in difficult areas and drought tolerant.**

## *Juniperus procumbens* 'Green Mound'

- **Use:** Very short growing, prostrate, mat forming ground cover. Beautiful bright green foliage, with just a hint of blue, that is very rigid and stiff, making this plant an excellent bonsai candidate. Excellent choice for an evergreen groundcover or for fill in areas where anything with height is not an option. Moderate growth rate, good drought tolerance.
- **Exposure/Soil:** Full/part sun; well-draining soil. Water may not puddle around plant, and appreciates slow release fertilizer twice a year. Once established needs only occasional water.
- **Growth:** Grows 6-8" tall and 4-6' wide. Spacing for 100% ground coverage is recommended at 2 1/2 - 3 feet apart, but can vary depending upon the particular location & situation. Planting too closely together will result in faster ground coverage, but many times will present serious overcrowding & die back issues as the plants mature.
- **Hardiness:** 5-8; Shrub
- **Foliage:** Evergreen. Very minimal bronzing or discoloration at all in cold weather
- **Flowers:** Not known for flowers.
