

# Blue Star Juniper

## *Juniperus squamata* 'Blue Star'

- **Use:** This icy blue Juniper spreads but is not ground hugging. Instead it makes graceful wide mounds that are particularly lovely as individual specimens in fields of gravel or bark or as a ground-cover. A good choice for banks and rock gardens, where it grows gracefully around landscape boulders. Adds accent to a mass of flatter Juniper used for erosion control on banks and slopes. Particularly lovely in raised or seatwall planters. Excellent when planted up against red foliage such as Loropetalum or Berberis.
- **Exposure/Soil:** Prefers full sun to part sun. Water regularly, when top 3 in. of soil is dry to start. Little water needed once established.
- **Growth:** Slow-growing to 2-3 ft. high, 3-4 ft. wide.
- **Hardiness:** 5-9, Shrub
- **Foliage:** Dense blue-green foliage gives this selection a handsome appearance. Evergreen.
- **Flower:** No noticeable flowers.

**We have this in front of our house and love the blue color!**
