

Mr Bowling Ball Arborvitae

Thuja occidentalis 'Bobazam'

- **Use:** True to its name, Mr. Bowling Ball® arborvitae is a dwarf, mounded globe with soft, sage-green juvenile foliage. The habit is tight and compact, creating an outstanding landscape or container plant.
- **Exposure/Soil:** Preferably 3/4 day sun While it's a rugged plant, it would appreciate some afternoon shade in our hot summer areas. Water may not puddle around plant, and appreciates slow release fertilizer twice a year. Water if it hasn't rained in 7-10 days first 2 years. Must amend the soil if you have red clay! We recommend our **Pro Mix Soil!**
- **Growth:** *Slow growing; eventually reaches 24 to 30 in. tall and wide.*
- **Hardiness:** Zone 3a-8 Shrub
- **Foliage:** Evergreen. The lacy, rich green foliage has excellent year-round color retention. However, older interior foliage may shed as part of a normal renewal cycle in fall.
- **Flowers:** Neither the flowers nor the fruit are ornamentally significant.

Create an excellent low hedge with multiple plants. Space them two feet apart on center. You'll measure from the center of one to the center of the next. They'll make a wonderful ribbon of steady green color to define garden areas. They add a formal touch, but have a fine-texture that looks soft and pleasing.
