

Summer Snowflake Viburnum

Viburnum plicatum tomentosum 'Summer Snowflake'

- **Use:** This forms a dense pillar-like shrub in our shade garden where it is in constant bloom. A fine viburnum for a smaller garden. Not many shrubs bloom continuously from spring to fall, then end the growing season with bright red fruit and rich, wine-red fall leaves
- **Exposure/Soil:** Full to part sun. Requires well-drained soil and good moisture. Needs extra water during a drought.
- **Growth:** 4-8 feet tall and 3-4 feet wide
- **Hardiness:** 4-8 Shrub
- **Foliage:** Deciduous. Leaves are opposite, 2 to 4 inches long and 1 to 2 inches wide. Leaf veins appear sunken or creased, adding textural interest to the foliage. A wine-red leaf color signals the end to another growing season.
- **Flower:** The vibrant, snow-white flowers are show-stoppers in the spring landscape. Then as spring blossoms fade and other plants begin their summer growth phase, then gears up for an encore performance, flowering repeatedly throughout the summer and fall, often as late as November. Red berries.
