

# Willowwood Viburnum

## *Viburnum × rhytidophylloides* 'Willowwood'

- **Use:** This evergreen features excellent lustrous rugose leaves, which by definition means "full of wrinkles" or "sunken veils." Very large cauliflower-like bud clusters open to creamy white flowers that are followed by berries that start green turning to pink, then red and finally black, often with all berry colors showing on the plant at the same. Rebloom occurs in mid summer when the berries are just starting to turn color.
- **Exposure/Soil:** Full to part sun(best) to shade. Water regularly, when top 3 in. of soil is dry. Tolerant of all soils and positions as long as it is not too dry.
- **Growth:** At 10 to 12 feet tall and 8 to 10 feet wide, you'll want to provide ample space for this beauty to grow.
- **Hardiness:** Zone 5-8; Shrub
- **Foliage:** Deciduous. Lustrous wrinkled foliage.
- **Flower:** Small, creamy white flowers arranged in flattened clusters appear, followed by oval-shaped red fruit that turns black as they mature

- Creamy white flowers in spring
- Fruit turns from pink to red to black
- Reblooms which results in continuous color
