

Patti Faye Deodar Cedar

Cedrus deodara 'Patti Faye'

- **Use:** Patti Faye is a wonderful introduction from a nursery in Mobile that has shown excellent heat tolerance on a tree with beautiful steel-blue foliage. While most Deodar Cedars have pendulous branches, Patti Faye has a unique horizontal branching habit and foliage color similar to the Blue Atlas Cedar with an almost perfect Christmas tree shape with no pruning necessary. A classic conifer with outstanding performance all across zone 7 and south to zone 10, Patti Faye loves the sun and is exceptionally low maintenance and drought tolerant, but give her plenty of room to grow. Ideal for use as a specimen or in privacy screen plantings. A fast growing selection that is deer resistant and drought tolerant. Great for use as a large specimen plant, as a screen or privacy fence or as a focal point in your landscape.
- **Exposure/Soil:** Full to part sun. Follow a regular watering schedule during the first growing season to establish a deep, extensive root system. Watering can be reduced after establishment. Feed with a general purpose fertilizer before new growth begins in spring. Pruning time: winter.
- **Growth:** Give them plenty of room to grow tops out at 50 feet or more in height and 20 feet or more wide.
- **Hardiness:** Zone 7-10; Tree
- **Foliage:** Evergreen. New needles emerge a silvery-grey color turning to a rich blue green.
- **Flower:** 3 to 4" bluish green cones on female trees.

Great focal point and specimen in parks and large gardens. Give this tree plenty of room to spread as it will be the dominant feature in the landscape.
