

Pink Champagne Smoketree

Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Cotinus coggygria 'Pink Champagne'

- **Use:** Pink Champagne Smokebush features airy panicles of salmon flowers with coral-pink stalks at the ends of the branches from early to late summer. The round leaves turn an outstanding scarlet in the fall. A multi-stemmed deciduous shrub with an upright spreading habit of growth. Its texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.
- **Exposure/Soil:** Full sun. Drought tolerant once established. Needs at least 6 hours afternoon sun.
- **Growth:** Reaches 10 feet tall and wide. This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed.
- **Hardiness:** Zone 5-8, Large shrub/ Small tree
- **Foliage:** Deciduous. Foliage begins dark green then turn deep scarlet in fall. Excellent planted in the landscape as a specimen.
- **Flower:** In summer, it produces pink flower panicles. Its flowers have a long and fluffy shape. Like puffs of smoke. That is why Cotinus is also called 'smoke bush'.
