

Red Skin Peach Tree

A large freestone with good red color and yellow flesh. Midseason bearing, with showy flowers. A seedling from 'Elberta'. Good fresh, for canning or freezing.

Prunus persica 'Red Skin'

- **Use:** A great choice for areas with unexpected late frosts because it flowers longer than other peaches and will still produce fruits. This popular peach yields lots of fruit with gold-yellow flesh and red skin. This selection produces freestone fruits, which means the pit falls out easily when it's cut open. There is no need to plant an additional peach variety for pollination because this tree is self-fruitful.
- **Exposure/Soil:** Full to part sun. Soil should be well-drained. Acidic soil is preferred, though it can tolerate a wide variety of soils. They are not drought-tolerant, so proper watering is a must.
- **Growth:** Grows 20-25 tall and wide.
- **Hardiness:** Zone 5-9; Tree
- **Foliage:** Deciduous. Dark green leaves.
- **Flower:** Fruit is terrific picked straight from the tree and eaten fresh, sliced into fruit salad, or baked in pies, tarts or crisps. Best used for large scale plantings.
