

Pygmy Date Palm

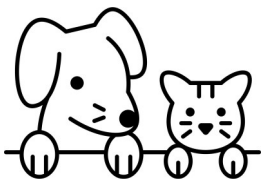

Phoenix roebelenii

- **Use:** A small to medium sized palm to about 9' tall, although older plants can be quite tall. This rugged little palm looks great indoors – just give it a bright spot and keep it out of drafts (and away from where someone could brush against the spines. Looks amazing next to your swimming pool or hot patio in the warmer months when temps are above 50 degrees!
- **Exposure/Soil:** Does best when kept in filtered light, but will also thrive in full sunlight. Water regularly when top 3in of soil is dry. We recommend our **potting mix and slow release fertilizer**.
- **Growth:** This slow growing palm can reach heights of 6-12' tall with a 6'10' spread. Grows larger in Florida where it is cold hardy.
- **Hardiness:** Zone 10-11; Houseplant; Tropical
- **Foliage:** It has a thick crown of narrow, arching, dark green fronds, which are much finer than those of the other types and have a thin layer of white scales. The short, slender stem eventually becomes roughened as old leaf bases accumulate along its length. Although the plant normally has only a single stem, it sometimes produces several.
- **Flowers:** Cream color flowers are held on short, 30 cm inflorescences and are followed by small black dates on the female plants (male flowers are borne on a separate plant).

This plant filters pollutants from the air while releasing oxygen. With this plant in your home, you breathe cleaner air.

This plant is considered non-toxic, therefore safe around children and pets.
