

Huvi Clematis

Clematis 'Huvi'

- **Use:** For beautiful colors, extravagance of blooms, and graceful habit, nothing compares with Clematis, the queen of the flowering vines. Whether used on posts or fences, clambering through shrubs and trees, or following wire frames in borders, they will enrich the landscape.
- **Exposure/Soil:** Full sun–shade (not deep shade); Water regularly, when top 3” of soil is dry. Prefers to have its roots shaded and its flowers in the sun in the South.. Use slow release fertilizer twice a year. Once established needs only occasional water.
- **Growth:** Grows 6-8’ tall. Group 3 Pruning: Pruning group 3 clematis can feel a bit brutal. The key is to be brave. These plants all flower on the new season’s growth. Prune Group 3 clematis in February in the South and in early March in the North. Start at ground level and work up until you reach the first pair of good, strong buds. Prune just above that. Repeat for the rest of the plant.
- **Hardiness:** Zone 4-8; Perennial, Vine
- **Foliage:** Deciduous. Delicate green foliage grows quickly. Compact grower.
- **Flowers:** It is yet another introduction from the prolific hybridizer, Uno Kivistik. Huvi has glossy, carmine red flowers in June to July and again in August or September. The flowers are 4 to 6 inches across and have cupped sepals with slightly wavy margins.

**A must have
vine in
the garden
for beginner
Gardeners.**
